Abstract of JP2000056756

PROBLEM TO BE SOLVED: To obtain a support apparatus for musical instrument training having sufficient operability.

SOLUTION: The musical score relating to the main part assigned by a trainee is displayed in a central display region 110. The trainee assigns the measure to be trained by inputting a numerical value into the box in a display region 150 or clicking the prescribed measure in the central display region 110. The MIDI data of the measure to be trained is reproduced by the button manipulation in a display region 170. Which of the main part/accompaniment part is to be reproduced may be selected by the button manipulation within a display region 160. Several ways of the measures to be trained may be registered by the button manipulation within a display region 180. As to the specific measures, auxiliary information, such as notes, is added thereto and the occasional displaying of the auxiliary information is possible. The MIDI data has the set-up measures corresponding to plural MIDI sound sources.
